EXPERIENCE

- Research Assistant** Jul 2022 – Oct 2022
TU Munich Munich, Germany
- Worked on TensorDSE, a Design-Space Exploration framework to guide machine learning model deployments.
 - Evaluated the performance of various ML models across GPUs, CPUs and TPUs with TensorFlow Lite.
 - Generated cost analysis reports for Google's Coral Edge TPU via USB traffic analysis (PyShark) during inference.
 - TensorDSE used reports to distribute a model's inference/deployment optimally onto available hardware devices.
- Embedded Software Engineer – Internship** Aug 2021 – Jan 2022
Molabo GmbH Ottobrunn, Germany
- Added unit-tests (GTest) and code coverage (lcov) to safety critical features of their motor's embedded controller.
 - Developed tooling for state simulations of their electric motor via Linux's virtual CAN interface and mock APIs.
 - Extended their firmware update system used by 20+ clients, consisting of partial updates via CAN bus.
 - Automated build and testing workflows via Jenkinsfiles, Makefiles and CMake for a team of over 10 engineers.

PROJECTS

- Cloud-TreeFinder** | *GCP, Terraform, Python, C++, Distributed Systems* Mar 2024 – Present
- Launches a cloud cluster and from a pool of N VMs, creates an optimal multicast tree of depth D and fanout F.
 - Deploys probe jobs on randomly selected node subsets, collecting and processing resulting reports (JSON).
 - Applies a developed heuristic from the collected data to select nodes for the tree layer by layer.
 - Uses terraform to manage cloud state, ZMQ for node communication and Protobufs for data (de)-serialization.
- Open-MPI Value Iteration** | *C++, Parallel-Computing, MPI, HPC* 2021 – 2022
- Implemented a prototype that solves a Stochastic Navigation Problem using Asynchronous Value Iteration (AVI).
 - Leveraged different OpenMPI techniques to distribute its workload across an HPC cluster and gather results.

PUBLICATIONS

- Design and Implementation of A Scalable Financial Exchange in the Cloud** | *(Paper)* Jan 2024 – Present
- Novel Cloud financial exchange achieving low latency of $\leq 250 \mu s$, with a difference $< 1 \mu s$ for 1K receivers.
 - Achieves better scalability and around 50% lower latency than the multicast service provided by AWS.
 - Used kernel-bypass techniques (DPDK) to scale performance up to a 35K multicast packet rate.
