Daniel Duclos-Cavalcanti

Computer Engineer

55th Street New York, New York 10019

 $516-912-7975 \mid U.S. \ Citizen \mid \underline{me@duclos.dev} \mid \underline{www.duclos.dev} \mid \underline{linkedin/duclos-cavalcanti} \mid \underline{github/duclos-cavalcanti} \mid \underline{github/duclos-caval$

Education

New York University

Sept 2023 – May 2024

Visiting Non-Degree Graduate Student

New York, USA

- Co-Authored Publication: Design and Implementation of A Scalable Financial Exchange in the Cloud
- Related Coursework: Operating Systems, Technologies in Finance GPA 4.0

Technical University of Munich

Oct 2020 - Oct 2024

M.Sc. Electrical and Computer Engineering

Munich, Germany

- Master Thesis: VM Selection Heuristic for Financial Exchanges in the Cloud
- Related Coursework: Machine Learning Methods, HW-SW Co-Design, High Performance Computing Lab

Technical University of Munich

 $Oct\ 2016-Sept\ 2020$

B.Sc. Electrical and Computer Engineering

Munich, Germany

Publications

Design and Implementation of A Scalable Financial Exchange in the Cloud | (Paper)

Jan 2024 – Present

- Novel Cloud financial exchange achieving low latency of $\leq 250 \mu s$, with a difference $\leq 1 \mu s$ for 1K receivers.
- Achieves better scalability and around 50% lower latency than the multicast service provided by AWS.
- Used kernel-bypass techniques (DPDK) to scale performance up to a 35K multicast packet rate.

Experience

Research Assistant

Jul 2022 - Oct 2022

TU Munich

Munich, Germany

- Worked on <u>TensorDSE</u>, a Design-Space Exploration framework to guide machine learning model deployments.
- Evaluated the performance of various ML models across GPUs, CPUs and TPUs with TensorFlow Lite.
- Generated cost analysis reports for Google's Coral Edge TPU via USB traffic analysis (PyShark) during inference.
- TensorDSE used reports to accelerate a model's inference/deployment optimally onto available hardware devices.

Embedded Software Engineer – Internship

Aug 2021 - Jan 2022

 $Molabo \ GmbH$

Ottobrunn, Germany

- Added unit-tests (GTest) and test coverage (lcov) to safety critical features of their motor's embedded controller.
- Developed tooling for state simulations of their electric motor via Linux's virtual CAN interface and mock APIs.
- Extended their firmware update system used by 18+ clients, consisting of partial updates via CAN bus.
- Automated build and testing workflows via Jenkinsfiles, Makefiles and CMake for a team of over 10 engineers.

Tutor - Embedded Systems Programming Lab

Apr 2021 - Aug 2021

TU Munich

Munich, Germany

- Mentored over 20 students in developing low-level FreeRTOS applications in C for embedded systems.
- Taught software engineering best practices, focusing on concurrency, real-time scheduling, and performance optimization.

Technical Skills

Languages: C++, Python, Golang, Rust, C, Bash, JavaScript, HTML, CSS, Lua, VHDL

Cloud Services: Google Cloud Platform (GCP), Amazon EC2 (AWS), Terraform, Packer, Vagrant Tools: Linux, Unix Shell, Git, Github CI/CD, Jenkins, CMake, GNU Make, Bazel, Vim, VSCode

Technologies: Docker, ZeroMQ, DPDK, MPI, FreeRTOS, FPGA, IoT, TensorFlow, Scipy, NumPy, Pandas, OpenMP

Verbal/Written: German – Fluent, Portuguese – Fluent

Projects

 $\textbf{Cloud-TreeBuilder} \mid \textit{GCP}, \textit{ZMQ}, \textit{Terraform}, \textit{Python}, \textit{C++}, \textit{Distributed Systems}, \textit{Heuristic}$

Mar 2024 - Present

- Launches and selects K out of N VMs in a cluster to create an optimal multicast tree of depth D and fan-out F.
- Deploys UDP based probe jobs on VM subsets, collecting data regarding their network performance (JSON).
- Applies a developed heuristic on collected data to select VMs for a tree layer by layer.
- Uses terraform to manage cloud state, ZMQ for node communication and Protobufs for data serialization.

Open-MPI Value Iteration | *C++*, *Parallel-Computing*, *MPI*, *HPC*

Mar 2022

- An HPC prototype that solves a stochastic navigation problem through Asynchronous Value Iteration (AVI).
- Used different MPI techniques to iteratively distribute workload across an HPC cluster and gather results.
